

Lecture 16 Wave Motion

Mechanical waves are waves that disturb and propagate through a medium; the ripple in the water due to the pebble and a sound wave, for which air is the medium, are examples of mechanical waves.

Electromagnetic waves are a special class of waves that do not require a medium in order to propagate, light waves and radio waves are two familiar examples.

16.1 Propagation of a Disturbance

All mechanical waves require (1) some source of disturbance, (2) a medium that can be disturbed, and (3) some physical mechanisms through which particles of the medium can influence one another.

What is phonon?

Serway/Jewett; Principles of Physics, 3/e
Figure 13.4

Transverse waves

Longitudinal waves

$$y(x, 0) = f(x)$$

$$y(x, t) = y(x - vt, 0)$$

$$y(x, t) = f(x - vt); \text{ moving to the right}$$

$$y(x, t) = f(x + vt); \text{ moving to the left}$$

Harcourt, Inc. items and derived items copyright © 2002 by Harcourt, Inc.

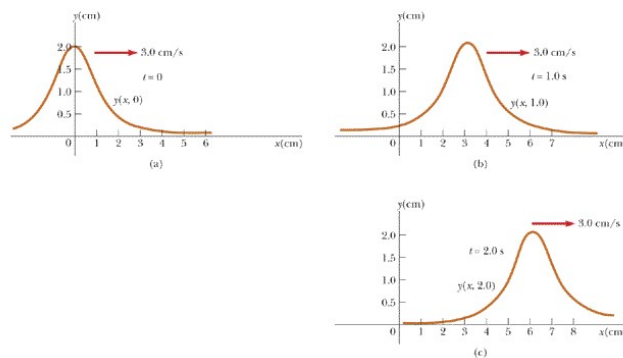

Sample Example: A pulse moving to the right

A wave pulse moving to the right along the x-axis is represented by the wave function

$$y(x, t) = \frac{2.0}{(x - 3.0t)^2 + 1} \quad \text{where } x \text{ and } y \text{ are measured in cm and } t \text{ is in sec.} \quad \text{Let us plot}$$

the wave form at $t = 0$, $t = 1$, and $t = 2$ s.

16.2 The Traveling Wave Model

crest: highest displacement

trough: lowest displacement

wave length

frequency

wave speed

Each particle of the string oscillates vertically in the y direction with simple harmonic motion.

(a)

at $t = 0$

$y = A \sin\left(\frac{2\pi}{\lambda}x\right)$, if the wave moves to the right with a speed of v

$y = A \sin\left[\frac{2\pi}{\lambda}(x - vt)\right]$, $v = \frac{\lambda}{T}$, $y = A \sin\left[\frac{2\pi}{\lambda}x - \frac{2\pi}{T}t\right]$

$k = \frac{2\pi}{\lambda}$, $\omega = \frac{2\pi}{T}$, $y = A \sin(kx - \omega t)$, $v = \frac{\omega}{k} = \lambda f$

$kx - \omega t = \text{const}$, $k \frac{dx}{dt} - \omega = 0$, $\frac{dx}{dt} = \frac{\omega}{k}$, $v = \frac{\omega}{k} = \lambda f$

if a wave moving in the negative direction of x .

$kx + \omega t = \text{const}$, $k \frac{dx}{dt} + \omega = 0$, $\frac{dx}{dt} = -\frac{\omega}{k}$, $v = -\frac{\omega}{k} = -\lambda f$

all traveling waves must be of the form: $y(x, t) = h(kx \pm \omega t)$

Serway/Jewett; Principles of Physics, 3/e
Figure 13.9

Sample Example: A traveling sinusoidal wave

A sinusoidal wave traveling in the positive x direction has an amplitude of 15 cm, a wavelength of 40 cm, and a frequency of 8 Hz. The vertical displacement of the medium at $t = 0$ and $x = 0$ is also 15 cm, (a) Find the angular wave number, period, angular frequency, and speed of the wave. (b) Determine the phase constant.

$$(a) \quad k = \frac{2\pi}{40}, \quad T = \frac{1}{f} = \frac{1}{8}, \quad \omega = \frac{2\pi}{T} = 50.3 \text{ rad/s}$$

$$v = \frac{\omega}{k} = f\lambda = 8 \cdot 40 = 320 \text{ cm/s}$$

$$(b) \quad y = 15 \sin\left(\frac{\pi}{20}x - 16\pi t + \phi\right) \quad \text{at } t = x = 0, y = 15$$

$$\sin \phi = 1, \quad \phi = \frac{\pi}{2}$$

16.3 The Speed of Waves on Strings

Serway/Jewett; Principles of Physics, 3/e
Figure 13.10

$$F_r = 2T \sin \theta \approx 2T\theta$$

$$m = \mu \Delta s = 2\mu R\theta$$

$$F_r = m \frac{v^2}{R}, \quad 2T\theta = 2\mu R\theta \frac{v^2}{R}$$

$$T = \mu v^2, \quad v = \sqrt{\frac{T}{\mu}}$$

Harcourt, Inc. Items and derived items copyright © 2002 by Harcourt, Inc.

Example: the speed of a pulse on a cord

Serway/Jewett; Principles of Physics, 3/e
Figure 13.11

A uniform cord has a mass of 0.3 kg and a total length of 6 m. Tension is maintained in the cord by suspending an object of mass 2 kg from one end. Find the speed of a pulse on the cord. Assume that the tension is not affected by the mass of the cord.

Harcourt, Inc. Items and derived items copyright © 2002 by Harcourt, Inc.

$$v = \sqrt{\frac{T}{\mu}} = \sqrt{\frac{2 \cdot 9.8}{0.3/6}} = 19.8 \text{ m/s}$$

The Wave Equation

$$y = A \sin(kx - \omega t)$$

$$v = \frac{dy}{dt} = -\omega A \cos(kx - \omega t), \quad a = -\omega^2 A \sin(kx - \omega t)$$

$$\frac{dy}{dx} = kA \cos(kx - \omega t), \quad \frac{d^2 y}{dx^2} = -k^2 A \sin(kx - \omega t)$$

$$\frac{d^2 y}{dx^2} = \frac{k^2}{\omega^2} \frac{d^2 y}{dt^2} = \frac{1}{v^2} \frac{d^2 y}{dt^2}$$

Example: A solution to the linear wave eq

Verify that the wave function presented in previous example is a solution to the linear wave eq.

$$y = \frac{2}{(x - 3t)^2 + 1}, \quad \frac{d^2 y}{dx^2} = \frac{1}{9} \frac{d^2 y}{dt^2}$$

16.4 Reflection and Transmission

Serway/Jewett; Principles of Physics, 3/e
Figure 13.15

Harcourt, Inc. items and derived items copyright © 2002 by Harcourt, Inc.

$$y_l(x,t) = A \cos(k_l x - \omega t), \quad v_l = \sqrt{\frac{T}{\mu_l}} = \frac{\omega}{k_l},$$

$$y_l'(x,t) = B \cos(-k_l x - \omega t)$$

$$y_r(x,t) = C \cos(k_r x - \omega t), \quad v_r = \sqrt{\frac{T}{\mu_r}} = \frac{\omega}{k_r}$$

$$x = 0, \quad y_l + y_l' = y_r, \implies A + B = C$$

$$\frac{d}{dx} y_l + \frac{d}{dx} y_l' = \frac{d}{dx} y_r, \implies k_l(A - B) = k_r C$$

$$B = \frac{k_l - k_r}{k_l + k_r} A, \quad C = \frac{2k_l}{k_l + k_r} A, \quad \text{light string} \rightarrow \text{small } \mu \rightarrow \text{small } k$$

16.5 Rate of Energy Transfer by Sinusoidal Waves on Strings

$$\Delta K = \frac{1}{2} \Delta m v^2 = \frac{1}{2} \mu \Delta x v^2, \quad dK = \frac{1}{2} \mu v^2 dx = \frac{1}{2} \mu \omega^2 A^2 \sin^2(kx - \omega t) dx$$

at $t = 0$, average kinetic energy in a period of wave length

$$K_\lambda = \frac{1}{2} \mu \omega^2 A^2 \int_0^\lambda \sin^2(kx) dx, \quad \int_0^\lambda \sin^2(kx) dx = \int_0^\lambda \frac{1 - \cos(2kx)}{2} dx = \frac{\lambda}{2}$$

$$K_\lambda = \frac{1}{4} \mu \omega^2 A^2 \lambda$$

the change in length from Δx to l is: $\Delta x \sqrt{1 + \left(\frac{dy}{dx}\right)^2} - \Delta x \approx \frac{1}{2} \left(\frac{dy}{dx}\right)^2 \Delta x,$

$$\Delta U = T \cdot (l - \Delta x) = \frac{1}{2} T \left(\frac{dy}{dx}\right)^2 \Delta x$$

$$\Delta U = \frac{1}{2} T \left(\frac{dy}{dx}\right)^2 \Delta x = \frac{1}{2} \mu v^2 \left(\frac{dy}{dx}\right)^2 \Delta x = \frac{1}{2} \mu \left(\frac{\omega}{k}\right)^2 \left(\frac{dy}{dx}\right)^2 \Delta x,$$

$$dU = \frac{1}{2} \mu \omega^2 A^2 \sin^2(kx - \omega t) dx$$

$$\text{at } t = 0, \quad U_\lambda = \frac{1}{2} \mu \omega^2 A^2 \int_0^\lambda \sin^2(kx) dx, \quad \int_0^\lambda \sin^2(kx) dx = \int_0^\lambda \frac{1 - \cos(2kx)}{2} dx = \frac{\lambda}{2}$$

$$K_\lambda = \frac{1}{4} \mu \omega^2 A^2 \lambda$$

$$E_\lambda = \frac{1}{2} \mu \omega^2 A^2 \lambda, \quad P = \frac{E_\lambda}{T} = \frac{1}{2} \mu \omega^2 A^2 v$$

Sample Example:

A string with linear mass density $5 \times 10^{-2} \text{ kg/m}$ is under a tension of 80 N. How much power must be supplied to the string to generate sinusoidal waves at a frequency of 60 Hz and an amplitude of 6 cm?

$$A = 0.06 \text{ m}, \quad f = 60, \quad \mu = 0.05 \text{ kg/m}, \quad v = \sqrt{\frac{80}{0.05}} = 40$$

$$P = \frac{1}{2} 0.05 \cdot 60^2 \cdot 0.06^2 \cdot 40 = 512 \text{ W}$$

16.6 The Linear Wave Equation – Physical

Model

$$\sum F_y = T \sin \theta_B - T \sin \theta_A \approx T \tan \theta_B - T \tan \theta_A$$

$$\sum F_y = T \left(\frac{\partial y}{\partial x} \right)_B - T \left(\frac{\partial y}{\partial x} \right)_A$$

$$\sum F_y = ma_y = m \frac{\partial^2 y}{\partial t^2} = \mu \Delta x \frac{\partial^2 y}{\partial t^2} = T \left(\frac{\partial y}{\partial x} \right)_B - T \left(\frac{\partial y}{\partial x} \right)_A = T \frac{\partial}{\partial x} \left(\frac{\partial y}{\partial x} \right) \Delta x$$

$$\mu \Delta x \frac{\partial^2 y}{\partial t^2} = T \frac{\partial^2 y}{\partial x^2} \Delta x \quad \text{the sinusoidal wave function is } y(x, t) = A \sin(kx - \omega t)$$

$$\frac{\partial^2 y}{\partial x^2} = -k^2 A \sin(kx - \omega t), \quad \frac{\partial^2 y}{\partial t^2} = -\omega^2 A \sin(kx - \omega t)$$

$$\mu \omega^2 = T k^2 \quad \rightarrow \quad v = \frac{\omega}{k} = \sqrt{\frac{T}{\mu}} \quad \rightarrow \quad \frac{\partial^2 y}{\partial x^2} = \frac{T}{\mu} \frac{\partial^2 y}{\partial t^2} = \frac{1}{v^2} \frac{\partial^2 y}{\partial t^2}$$
